

Create Node-RED Service

The screenshot displays the Node-RED web interface. The top bar includes the Node-RED logo, a 'Deploy' button, and a menu icon. Below the top bar, there is a search bar labeled 'filter nodes' and a tab labeled 'Flow 1'. The left sidebar contains two categories of nodes: 'common' and 'function'. The 'common' category includes nodes like inject, debug, complete, catch, status, link in, link call, link out, and comment. The 'function' category includes function and switch nodes. The main workspace shows a flow with two nodes: an 'inject' node with the payload '"Hello Node-RED!"' and a 'debug' node. A curved line connects the output of the inject node to the input of the debug node. The right sidebar shows the 'debug' console, which displays the following message:

```
11/11/2022, 2:33:32 PM node: ea17f41fe4250f92  
msg.payload : string[17]  
""Hello Node-RED!""
```
